

STREET LIGHTING POLES

INTRODUCTION

Street lighting poles are produced in accordance with all kinds of weather and light sources for the continuity and safety of use of roads and streets. These poles are functional poles resistant to wind-induced vibration and bad weather conditions.

Street Lighting Systems have light-sensitive photocells that activate the lamp automatically when needed, at times when there is little to no ambient light.

APPLICATION

- Streets
- Boulevards
- Pedestrian Crossings
- Highways
